

MALONE CAMPBELL ROAD FACILITY, TEXAS CITY, GALVESTON COUNTY, TEXAS

Week ending 09/20/2015

On July 6, 2015 FOSC Zehner initiated an emergency pump down of contaminated storm at the facility which was authorized by the R6 Superfund Division Director. The initiation of emergency actions were necessary to abate the imminent and substantial threat of discharge of several hundred thousand gallons of contaminated storm water located on the Site from several multi-inch rainfalls associated with Tropical Storm Bill and other sub-tropical weather fronts that had impacted the Site. On-site disposal well WDW-138 began operations on July 6, 2015. The FOSC also authorized the operation of the additional on-site injection well WDW-73. Although past rains have increased contact (contaminated) stormwater to approximately 3 million gallons in API separators and impoundments, no rain occurred during this reporting period. Both injection wells (WDW-138 and WDW-73) are operational. Both wells received injectate from September 14 through September 20, for a total of 487,054 gallons of stormwater injected.
